4. For volume purchases different fascia materials, colours and sizes will be considered
5. Ventilation Requirements: No ventilation is required however it is advised that the room has a window that can be opened if required should the heat build up.

DESCRIPTION

- Bio-Ethanol flueless fire design. No chimney is required.
- The fire can be mounted on any wall within a room as long as it can support the weight. The fire is not suitable for use in a bedroom or bathroom.
- The fuel is available to purchase from www.easyfire.co.uk. It is advised to purchase good quality fuel as some cheaper makes can produce smells when burning.
- The fuel is poured into the trough provided. Ensure any spillages are wiped clean with a damp cloth and removed before lighting. To light, simply touch the surface of the gel with a naked flame. We advise using a long lighter but matches can also be used. Ensure any used matches are disposed of and not left in the gel as this will cause smoke. After about 1 minute the flame will be at its full height and will burn consistently.
- To extinguish replace the lid provided.
- Any gel remaining after use can be re-used.
- Wait for the fire to cool before relighting or re-filling. Do not re-fill the fire when it is lit.
- To clean, wash out the trough every four burns to prevent the building up of residue.
- In locations where Children or Elderly people are present it is advisable to fit a dress guard or fire guard as this is an open fronted and open flamed appliance.
- For full details visit the web site www.cvo.co.uk
